### **DETAILED ACTION**

This action is in response to applicant's response filed on 3/16/09. Claims 1-12 are now pending in the present application. **This action is made final.**

#### ***Information Disclosure Statement***

1. The references listed in the information disclosure statements submitted on 3/16/09 has been considered by the examiner (see attached PTO-1449).

#### ***Claim Rejections - 35 USC 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:  
  
(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
3. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable by **Nakamura** et al (US 20060001482) in view of **Hasegawa** (JP 2003-188683).

Regarding claim 9, **Nakamura** discloses a frequency adjusting circuit comprising:

a reference filter that sets a phase difference to a reference clock signal (see Figs. 1, 4 and [0013, 36, 37]) ;

an XOR circuit that outputs an exclusive OR of the output signal supplied from the reference filter and the reference clock signal (see Fig. 1 regarding phase detector 13 and [0031]);

a measurement circuit that measures a duty ratio of the output signal supplied from the XOR circuit, the frequency adjusting circuit using the output signal supplied from the measurement circuit for a control signal of the filter (see Fig. 1 regarding counter 24 and [0038, 39, 47]), and

a register that holds the output signal supplied from the measurement circuit as digital data, wherein the frequency adjusting circuit is intermittently operated (see Fig. 1, ref. 26, Abstract and [0039, 43,48]), noting for the “operation halted to reduce power consumption” which would implicitly teach the limitation “intermittently operated” as claimed.

However, **Nakamura** fails to teach the phase detector is implemented as an XOR circuit. However, in an analogous art, **Hasegawa** teaches a phase detector that is implemented as an XOR circuit (see Figs. 11, 13 regarding refs. 113 and 122). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to modify **Nakamura** for replacing/implementing the phase detector circuit with the XOR circuit as suggested by **Hasegawa** as an alternative design choice, for utilizing advantages of the digital capability of the XOR circuit such as cost and light weight.

***Allowable Subject Matter***

4. Claims **1-8, 10-12** are allowed.

***Conclusion***

5. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on 3/16/09 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609.04(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
